Practical No. 3 | A	**Enrolment No.**_____
Practical Problem	In this practical, continue with Practical 2. Select any one programming language from the following list: Python, Java, C++, ASP.NET, or Laravel, and complete the given tasks using the selected programming language. 1. Create a programming language file and solve the following programming problems: 1. Create an inverted right half pyramid pattern * 2. Create a Full Pyramid * * * * * * * * * * * * * * * 3. Find all odd numbers between 1 to 100 and display them. Then determine: • The list of odd numbers between 1 to 100 • The minimum odd number • The maximum odd number • The total(sum) of all odd numbers between 1 to 100 2. Create three separate files for the above tasks and push the code to GitHub.
Objective(s)	▪ To understand the process of pushing a local project to GitHub using command-line tools. ▪ To understand the basic concepts of Git and GitHub.
Solution must contain	Write a code with appropriate screenshot.

Assessment

Practical No. 4 | A	**Enrolment No.**_____
Practical Problem	In this practical, continue with Practical 3 | B set. clone a GitHub repository of your nearest classmate with an odd enrollment number and do these modifications. 1. Create a programming language file and solve the following programming problems: 1. Create an inverted right half pyramid pattern 1 2 3 4 5 6 7 8 9 1 2 3 4 5 6 2. Create a Full Pyramid A A B A B C A B C D A B C D E 3. Even numbers list in find below determines: • The list of even numbers between 1 to 50 • Total three minimum even number • Total three maximum even number • Find the average of even numbers between 1 and 50. 2. Use the GitHub repository of your nearest classmate with an odd enrollment number and perform only this specific practical task in that repository. After completing the task, merge the changes into the same repository.
Objective(s)	▪ To understand the process of clone a repository project to GitHub using command. ▪ To understand the basic concepts of Git and GitHub.
Solution must contain	Write a code with appropriate screenshot.

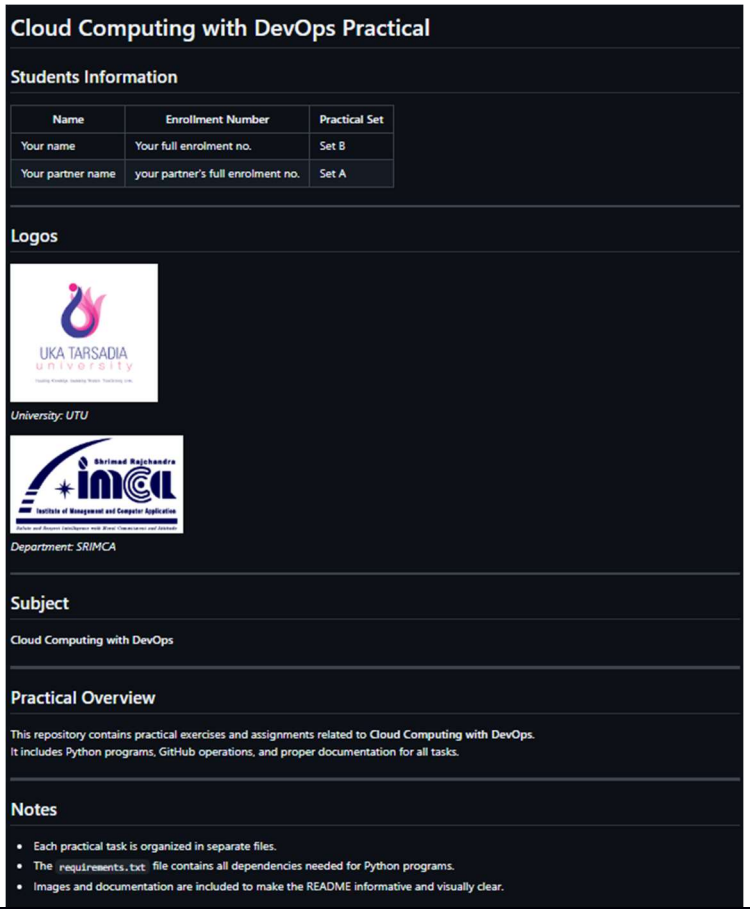
Practical No. 5 | A	Enrolment No._____
Practical Problem	In this practical, continue with Practical 4. Clone your own repository, create a requirements.txt file and add the necessary dependencies. Also, create a README file with images to provide proper documentation, including screenshots as shown below.



Cloud Computing with DevOps Practical

Students Information

Name	Enrollment Number	Practical Set
Your name	Your full enrolment no.	Set B
Your partner name	your partner's full enrolment no.	Set A

Logos

University: UTU

Department: SRIMCA

Subject

Cloud Computing with DevOps

Practical Overview

This repository contains practical exercises and assignments related to **Cloud Computing with DevOps**.
It includes Python programs, GitHub operations, and proper documentation for all tasks.

Notes

- Each practical task is organized in separate files.
- The `requirements.txt` file contains all dependencies needed for Python programs.
- Images and documentation are included to make the README informative and visually clear.

Objective(s)	▪ To create README file a functional and well-documented project that is easy for users and developers to understand, use, and contribute to.
Solution must contain	Write a code with appropriate screenshot.

Practical No. 6 | A	**Enrolment No._____**
Practical Problem	This practical based on Docker. 1. Creating or Pulling an Image: • Create a Docker image or pull an existing image in Docker. • Convert the image into a container. • Perform this practical using the "hello-world" image entirely through commands. 2. Pulling and Running n8n Image: • Pull the n8n Docker image and convert it into a container. • Include a screenshot of the output showing the container running.
Objective(s)	▪ To understand Docker image creation, pulling, and container execution, and demonstrate practical skills in running Docker containers using commands.
Solution must contain	Screenshots showing successful execution of both containers and Commands to pull and run the n8n Docker image.

Assessment
